Here are some highlights of what was going on at the Economics Department at the University of Vienna in the year 2014.

First, there were some comings and goings. Let’s start with the latter. A number of wonderful colleagues have left our Department: Manfred Nermuth, Harald Fadinger and Katrin Rabitsch. Manfred has been Head of Department for many years and now enjoys his Professor Emeritus status; Harald was an assistant professor at our Department and has now become associate professor of international economics at the University of Mannheim in Germany; and Katrin was visiting professor for one year and returned to her position at the Vienna University of Economics and Business. On behalf of all colleagues, I thank all three of them for their contributions and dedication to our department.

Fortunately, we also had several equally wonderful colleagues joining our Department in the last year at our still- quite-new building at Oskar-Morgenstern-Platz 1. Philipp Schmidt-Dengler joined us from Mannheim University and brings leading expertise in industrial organization and econometrics to our Department. Paul Pichler started on a tenure track macro position. He joined us from the Austrian National Bank at which he kept a part-time position and from which he also brings lots of hands-on experience. Marc Goni joined us from Pompeu Fabra to start on a 6-year assistant professor position. In his job talk he impressed us with his research on assortative matching and persistent inequality, for which he studied an elite marriage market in London in the 19th century. Mathias Staudigl joined us as a visiting professor for half a year from the Center for Mathematical Economics in Bielefeld, Germany. He will now start a tenure track position at the University of Maastricht, in the Netherlands. Finally, Alexander Wagner joined us as a post doc to do research on behavioral economics and political economy.

There was also much workshop activity during the past year as members of our Department co- organized and hosted several workshops. We had workshops in “Behavioral Public Economics”, “Public Organizations”, and the “Economics of Advertising”. We also had a one-day workshop in honor of Manfred Nermuth on the occasion of his transition to Emeritus status. And last but certainly not least, in October 2014 we hosted the “Symposion - 100 Jahre Böhm-Bawerk” to commemorate the 100th anniversary of the death of Eugen von Böhm-Bawerk (1851 - 1914)—the important representative of the “Austrian School” of economics.
In terms of research, we continue to be a busy pack of people. This is, among other things, reflected in our seminars, participation at many conferences, the diverse research being conducted at the Department, and in our publications. Several papers, co-authored by department members, have been published last year in top journals such as *The American Economic Review* or *The Review of Economic Studies*.

Our goal is surely to continue achieving and maintaining excellence in both research and teaching.

Research and publications

Dissemination of research and exchange of ideas

The Department had more than 100 academic visitors over the year and our faculty made a similar number of trips to visit researchers in other departments and to present their research at conferences and workshops. We organized two regular Research Seminars in which 56 speakers presented their research and four workshops and one symposium (with an additional 45 invited speakers).

We also strive to disseminate our research to the public, contribute to public debate, interviews and public speeches of our faculty. For example, authors have expressed their personal views in 13 Articles in the Media.

Teaching

Our faculty has taught dozens of classes at all levels. Student intake in 2014 was 154 at the Bachelor level, 79 at the Master level and 3 at the PhD level. At the undergraduate level, about half of our students are Austrian, about a third is female. We congratulate the 37 Master students who completed their Master’s thesis and the 3 students who completed their PhD thesis.
**Administration and Services to the profession**

Faculty members have contributed much of their time and effort to administration of the Department, the faculty and other (internal and external) institutions. We have extensively served as referees, editors and the like to promote the scientific discourse.
ORGANIZATION, FACULTY AND STAFF

Organization

Head of Department: Wieland Müller
Deputy Head of department: Monika Gehrig-Merz
Deputy Director of studies: Konrad Podczeck
Deputy Director of graduate studies: Maarten Janssen

Incoming faculty

**Philipp Schmidt-Dengler** holds a PhD from Yale University, and joined us as a full professor. His main research interests are in Competition Policy, Game Theory & Applications, Industrial Organization, Microeconomics, Pricing.

**Marc Goni-Trafach** holds a PHD from Universitat Pompeu Fabra, and joined us as an assistant professor. His main research interests are in Growth & Development, History of Economic Thought & Philosophy of Economics, Labor Economics, Public Economics & Political Economy.

**Paul Pichler** holds a PHD from the University of Vienna, and joined us as an assistant professor. His main research interests are in Macroeconomics, Optimal Policy, Monetary-fiscal Policy interactions, Determination and Sustainability of Government debt.

**Mathias Staudigl** holds a PhD from the University of Vienna, and joined us a visiting professor at our Department. His main research interests are in Game Theory, Applied Mathematics, Learning Dynamics, Microeconomic Theory (mainly Decision Theory and Contract theory)

**Alexander Wagner** holds a PhD from the Toulouse School of Economics and joined us as an assistant professor. His main research interests are in Behavioral Economics, Applied Game Theory, Political Economy, Strategy and Decision Making.

Leaving faculty

**Manfred Nermuth** was employed as Professor at our Department from October 1, 1989 - September 30, 2014. His main research interests are in Economic Theory & Mathematical Economics, Information Economics and Microeconomics. He is now Emeritus Professor.

**Harald Fadinger** was employed as assistant professor at our Department from October 2008 until August 2014. His main interests are in Growth & Development, Industrial Organization, International Economics, Macroeconomics. He is now Associate Professor of Economics (W2 Professor) at the University of Mannheim.

**Katrin Rabitsch** was employed as a visiting professor at our Department from September 2013 – August 2014. Her main interests are in International Macroeconomics & Finance, Business Cycles, Open Economy Macroeconomics, Monetary Economics. She returned to her position as an associate professor at the Vienna University of Economics and Business.

A Penny for Your Thoughts: A Survey of Methods for Eliciting Beliefs, 
January 2014
Abstract:
Incentivized methods for eliciting subjective probabilities in economic experiments present the subject with risky choices or bets that encourage truthful reporting. We discuss the most prominent elicitation methods and their underlying assumptions, provide theoretical comparisons, and propose some extensions to the standard framework. In addition, we survey the empirical literature on the performance of these elicitation methods in actual experiments, considering also practical issues of implementation such as order effects, hedging, and different ways of presenting probabilities and payment schemes to experimental subjects. We end with some thoughts on the merits of using incentives for belief elicitation and some guidelines for implementation.

Karin Mayr, with René Böheim and Thomas Horvath:
Birthplace diversity and productivity spill-overs in firms, August 2014
Abstract:
We determine workforce composition and wages in firms in the presence of productivity spill-overs between co-workers. In equilibrium, workers' wages depend on the production structure of firms, own group size, and aggregate workforce composition in the rm. We estimate the wage effects of workforce diversity and own group size by birthplace and the implied production structure in Austrian firms using a comprehensive matched employer-employee data set. In our data, we identify a positive effect of workforce diversity and a negative effect of own group size on wages, which suggest that workers of different birthplaces are complements in production on average.
Owen Powell, with Natalia Shestakova and Dmitry Gladyrev:  
**The Effect of Financial Selection in Experimental Asset Markets**, August 2014  
Abstract:  
The market selection hypothesis posits that over time more successful traders will stay in the market, whereas those with trading losses will exit. If success is at least somewhat determined by behavior, then as a result of market selection traders who survive in markets behave differently than traders who are randomly drawn from the population to participate in markets. This effect has so far been ignored in the literature, therefore we design and carry out an experiment to study the effects of market selection on market outcomes. We find that markets populated by more extreme earners exhibit stronger mispricing, and that this is strongly related to the fact that more extreme earners experience higher bubbles in the past. This suggests that experience may not decrease bubbles in real markets as much as was previously thought. Furthermore, we find evidence of relationships between earnings, trading activity, portfolio risk and transaction risk. Mistakes are also associated with more extreme earnings, however this disappears over time.

Bernd Funovits:  
**Implications of Stochastic Singularity in Linear Multivariate Rational Expectations Models**, September 2014  
Abstract:  
In general, linear multivariate rational expectations models do not have a unique solution. This paper reviews some procedures for determining whether there exists a solution, whether it is unique, and infers on the dimension of indeterminacy and the number of free parameters in a parametrization thereof. A particular emphasis is given to stochastic singularity, i.e. the case in which the number of outputs is strictly larger than the number of (stochastic) inputs. First, it is shown that assuming stochastic singularity of the exogenous driving process has the same effects as (but is more natural than) assuming that some variables are predetermined, i.e have trivial one-step-ahead prediction error. Second, the dimension of the solution set is in general different from the one derived in the case where the number of outputs and inputs coincide. We derive this result in both the framework of [37, 34] (which impose nonexplosiveness conditions) and [9, 11] (which do not impose non-explosiveness conditions). In this context, the results of [34] and [11] are corrected and extended. Last, we note that the framework of [11] can be adjusted to incorporate non-explosiveness conditions and lends itself to an identifiability analysis of dynamic stochastic general equilibrium (DSGE) models.

Sandro Shelegia and Chris Wilson:  
**A Utility-Based Model of Sales with Informative Advertising**, September 2014  
Abstract:  
This paper presents a generalised framework to understand mixed-strategy sales behaviour with informative advertising. By introducing competition in the utility space into a clearinghouse sales model, we offer a highly tractable framework that can i) provide a novel welfare analysis of intra-personal price discrimination in sales markets, ii) characterise sales in a range of new contexts including complex market settings and situations where firms conduct sales with two-part tariffs or non-price variables such as package size, and iii) synthesise past research and highlight its key forces and assumptions.
Owen Powell:  
**Measuring mispricing in experimental markets**, October 2014  
Abstract:  
Mispricing (the difference between prices and their underlying fundamental values) is an important characteristic of markets. The literature on the topic consists of many different measures. This state of affairs is unsatisfactory, since different measures may produce different results. Stoeckl et al. (2010) partially address this problem by proposing (among other things) that measures of mispricing be independent of certain nominal variables: the number of dividend payments and the absolute level of fundamental values. Their conditions rule out all previous measures used in the literature and leads them to propose new measures in response. This paper proposes that mispricing measures be independent of an additional variable: the unit of account. This condition rules out the measures proposed by Stoeckl et al. (2010) and serves as the basis for a new measure of market mispricing, the Geometric Average Deviation (GAD). The unit of account condition is relevant to many market settings, and thus calls into question the findings of previous research based on other measures that fail to satisfy this condition. An application illustrates the potential impact of this new measure on previous experi

Gerhard Sorger and Tapan Mitra:  
**Non-cooperative resource exploitation by patient players**, October 2014  
Abstract:  
We consider a discrete-time dynamic game in which a finite number of players extract a non-renewable resource and derive consumption solely from the extracted amount (cake-eating game). Markov-perfect Nash equilibria can be constructed in this game not only if the players have time-preference factors that are smaller than 1, but also if these factors are equal to or even larger than 1. We demonstrate this result both for the case of identical players and for the case of heterogeneous players. In addition we study the influence of the model parameters on the equilibrium.

Karl Schlag and Peter Vida:  
**Believing when Credible: Talking about Future Plans**, November 2014  
Abstract:  
We explore in an equilibrium framework whether games with multiple Nash equilibria are easier to play when players can communicate. We consider two variants, modelling talk about future plans and talk about past actions. The language from which messages are chosen is endogenous, messages are allowed to be vague. We focus on equilibria where messages are believed whenever possible, thereby develop a theory of credible communication. Predictions confirm the longstanding intuition for Aumann’s (1990) Stag Hunt game which applies directly to an investment game with positive spillovers. Our results shed new light on the multiplicity of equilibria in economic applications.
Sandro Shelegia and Joshua Sherman:  
**When the Price You See Is Not the Price You Get: A Bargaining Study**,  
November 2014  

Abstract:  
Although (or because) it is uncommon to observe consumers bargaining at retail stores in the Western world, the circumstances under which retail firms are actually willing to bargain is largely unknown. We construct a theoretical model in order to better understand how price and firm characteristics influence a firm's incentives to bargain and test the model's predictions by conducting a field experiment at nearly 300 stores throughout Vienna, Austria. In particular, we analyze the extent to which retail firms throughout Vienna consent to granting a discount when asked. A discount was granted approximately 40% of the time, and the average positive discount was approximately 10% off of a product's posted price. We relate firms' willingness to bargain to price and firm characteristics, in line with our theory.
In the Media

Economic thinking can be applied to many issues and economists offer advice and opinions to a broad range of topics. Below we list recent contributions to dissemination of research, public debate, interviews and public speeches of our faculty. Authors express their personal views.
